

ON BLOCKCHAIN NO ONE CAN HEAR
AI SCREAM

Orwellian world of today

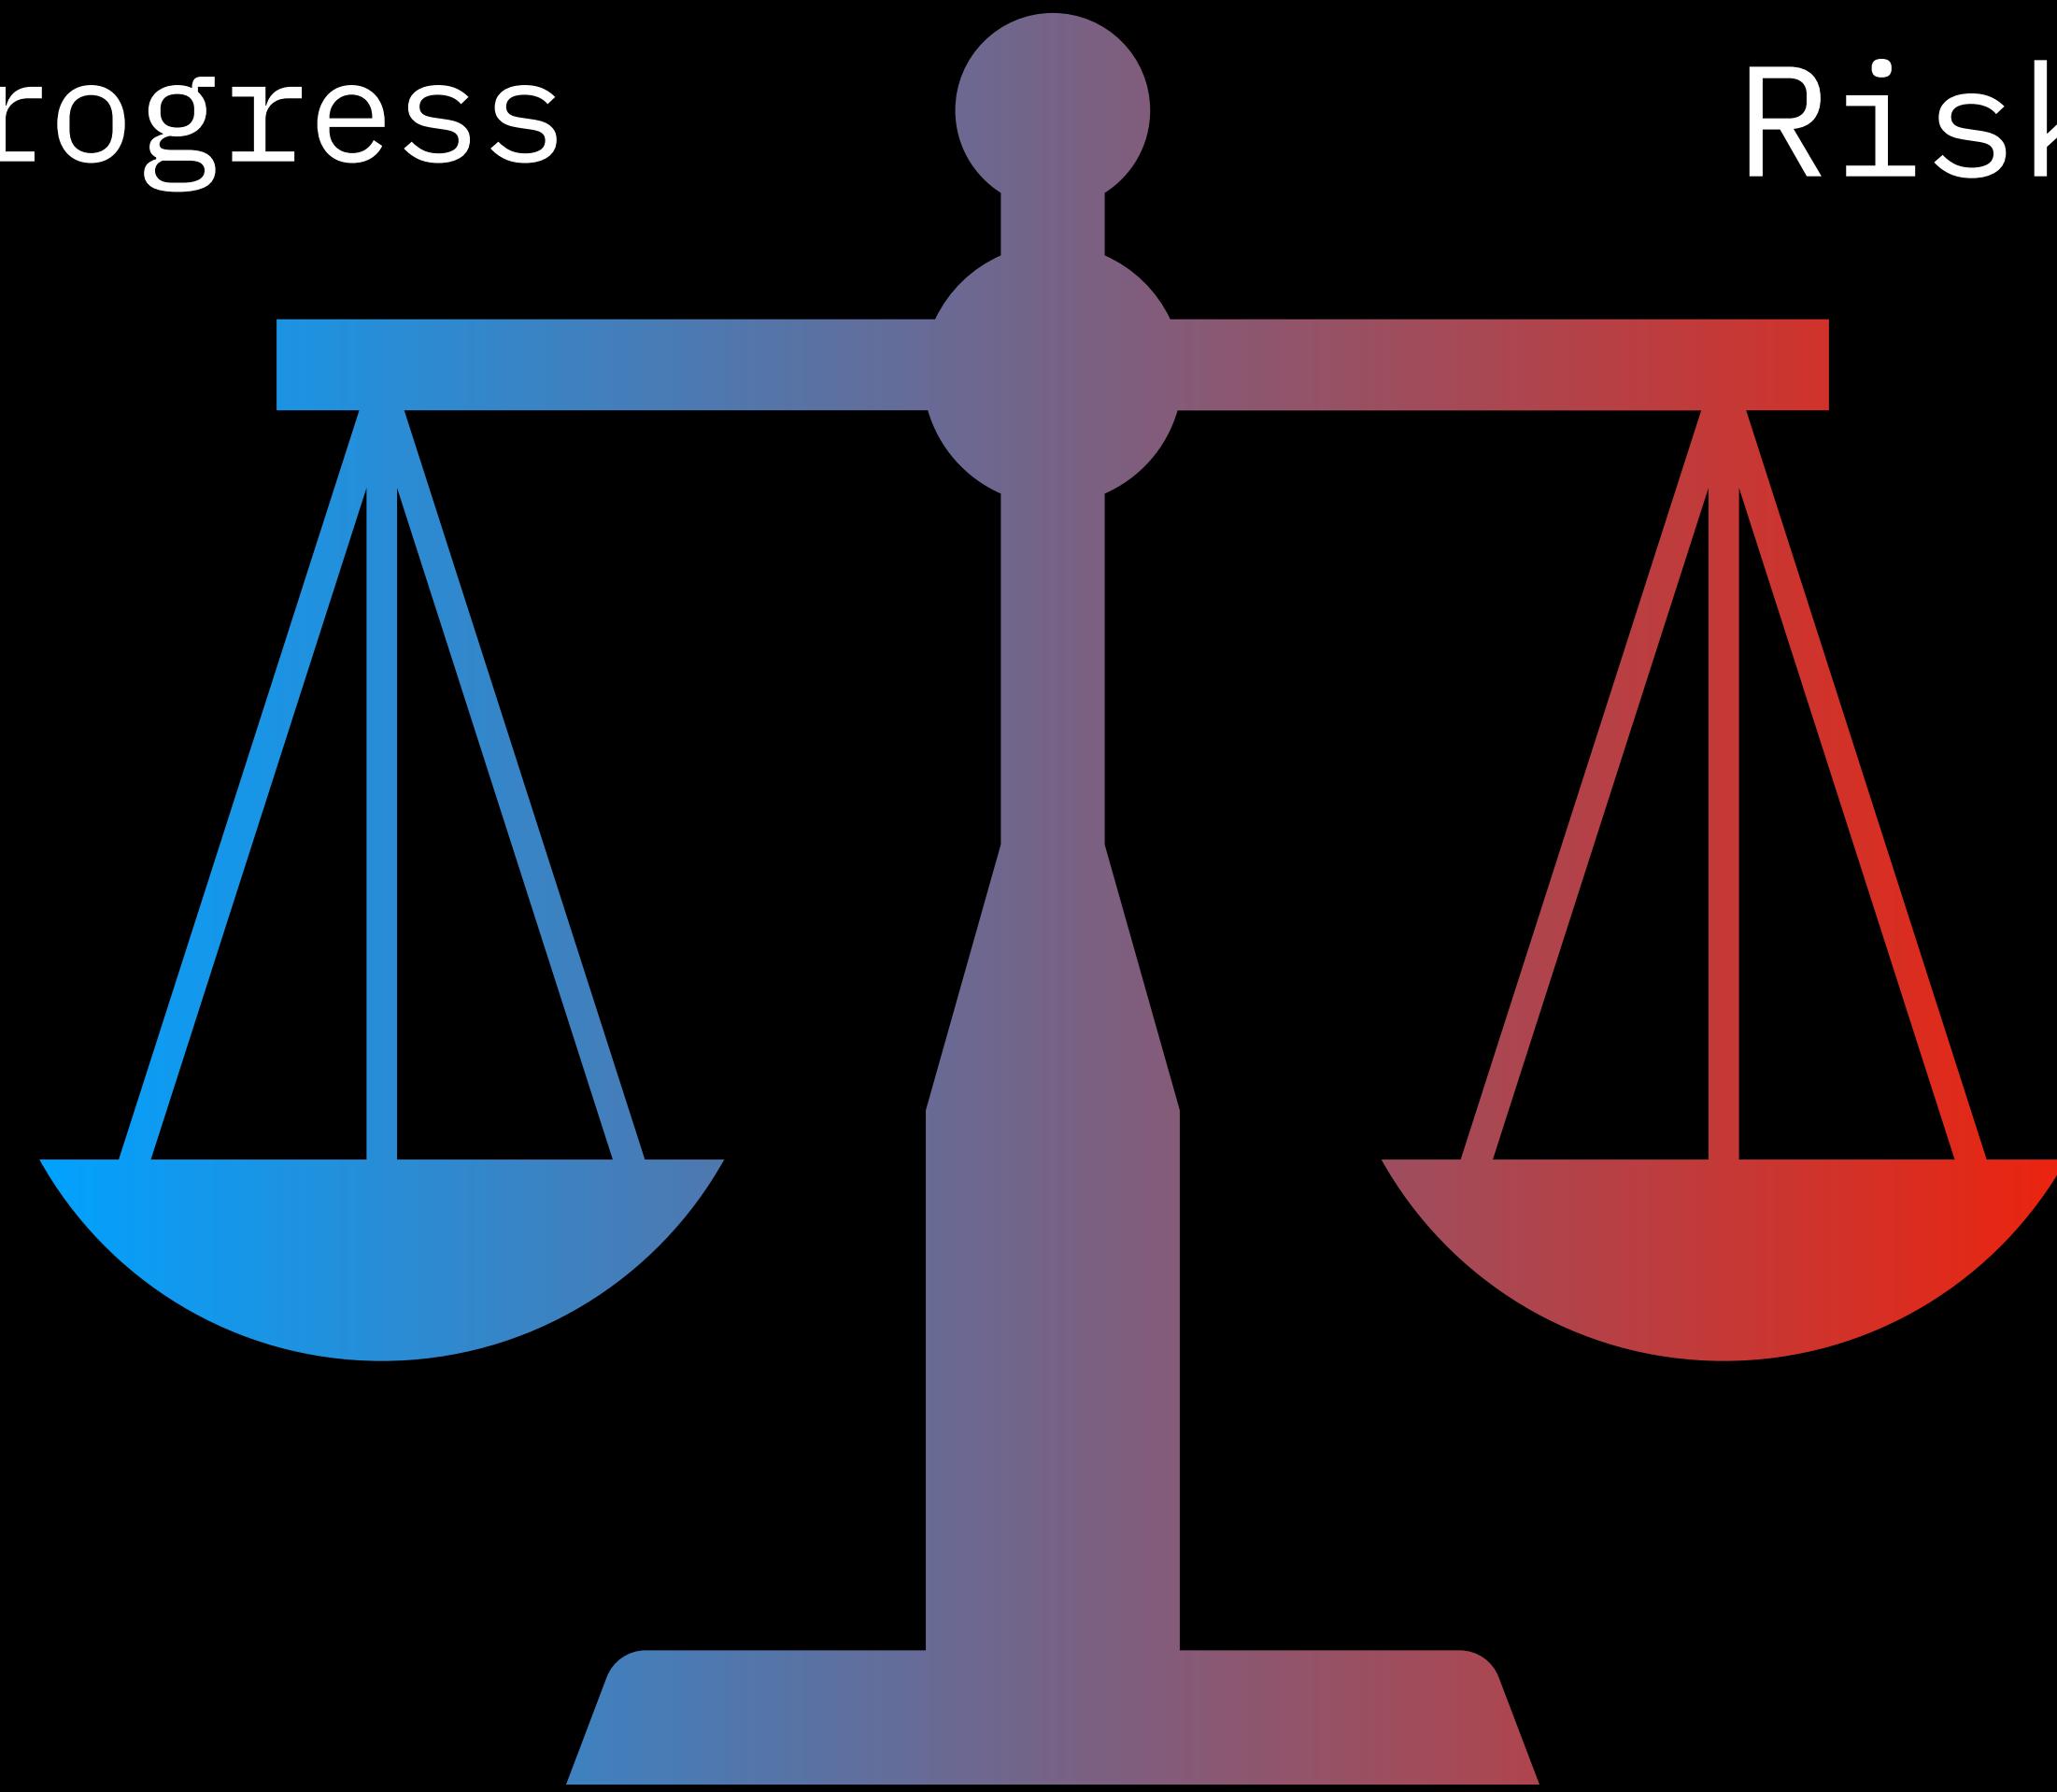

- “War is peace. Freedom is slavery. Ignorance is strength.”
- “The whole climate of thought will be different. There will be no thought.”
- “Principles: Newspeak, double think, the mutability of the past.”
- “Who controls the past, controls the future: who controls the present controls the past.”
- “No emotion was pure, because everything was mixed up with fear and hatred.”

Expectations:

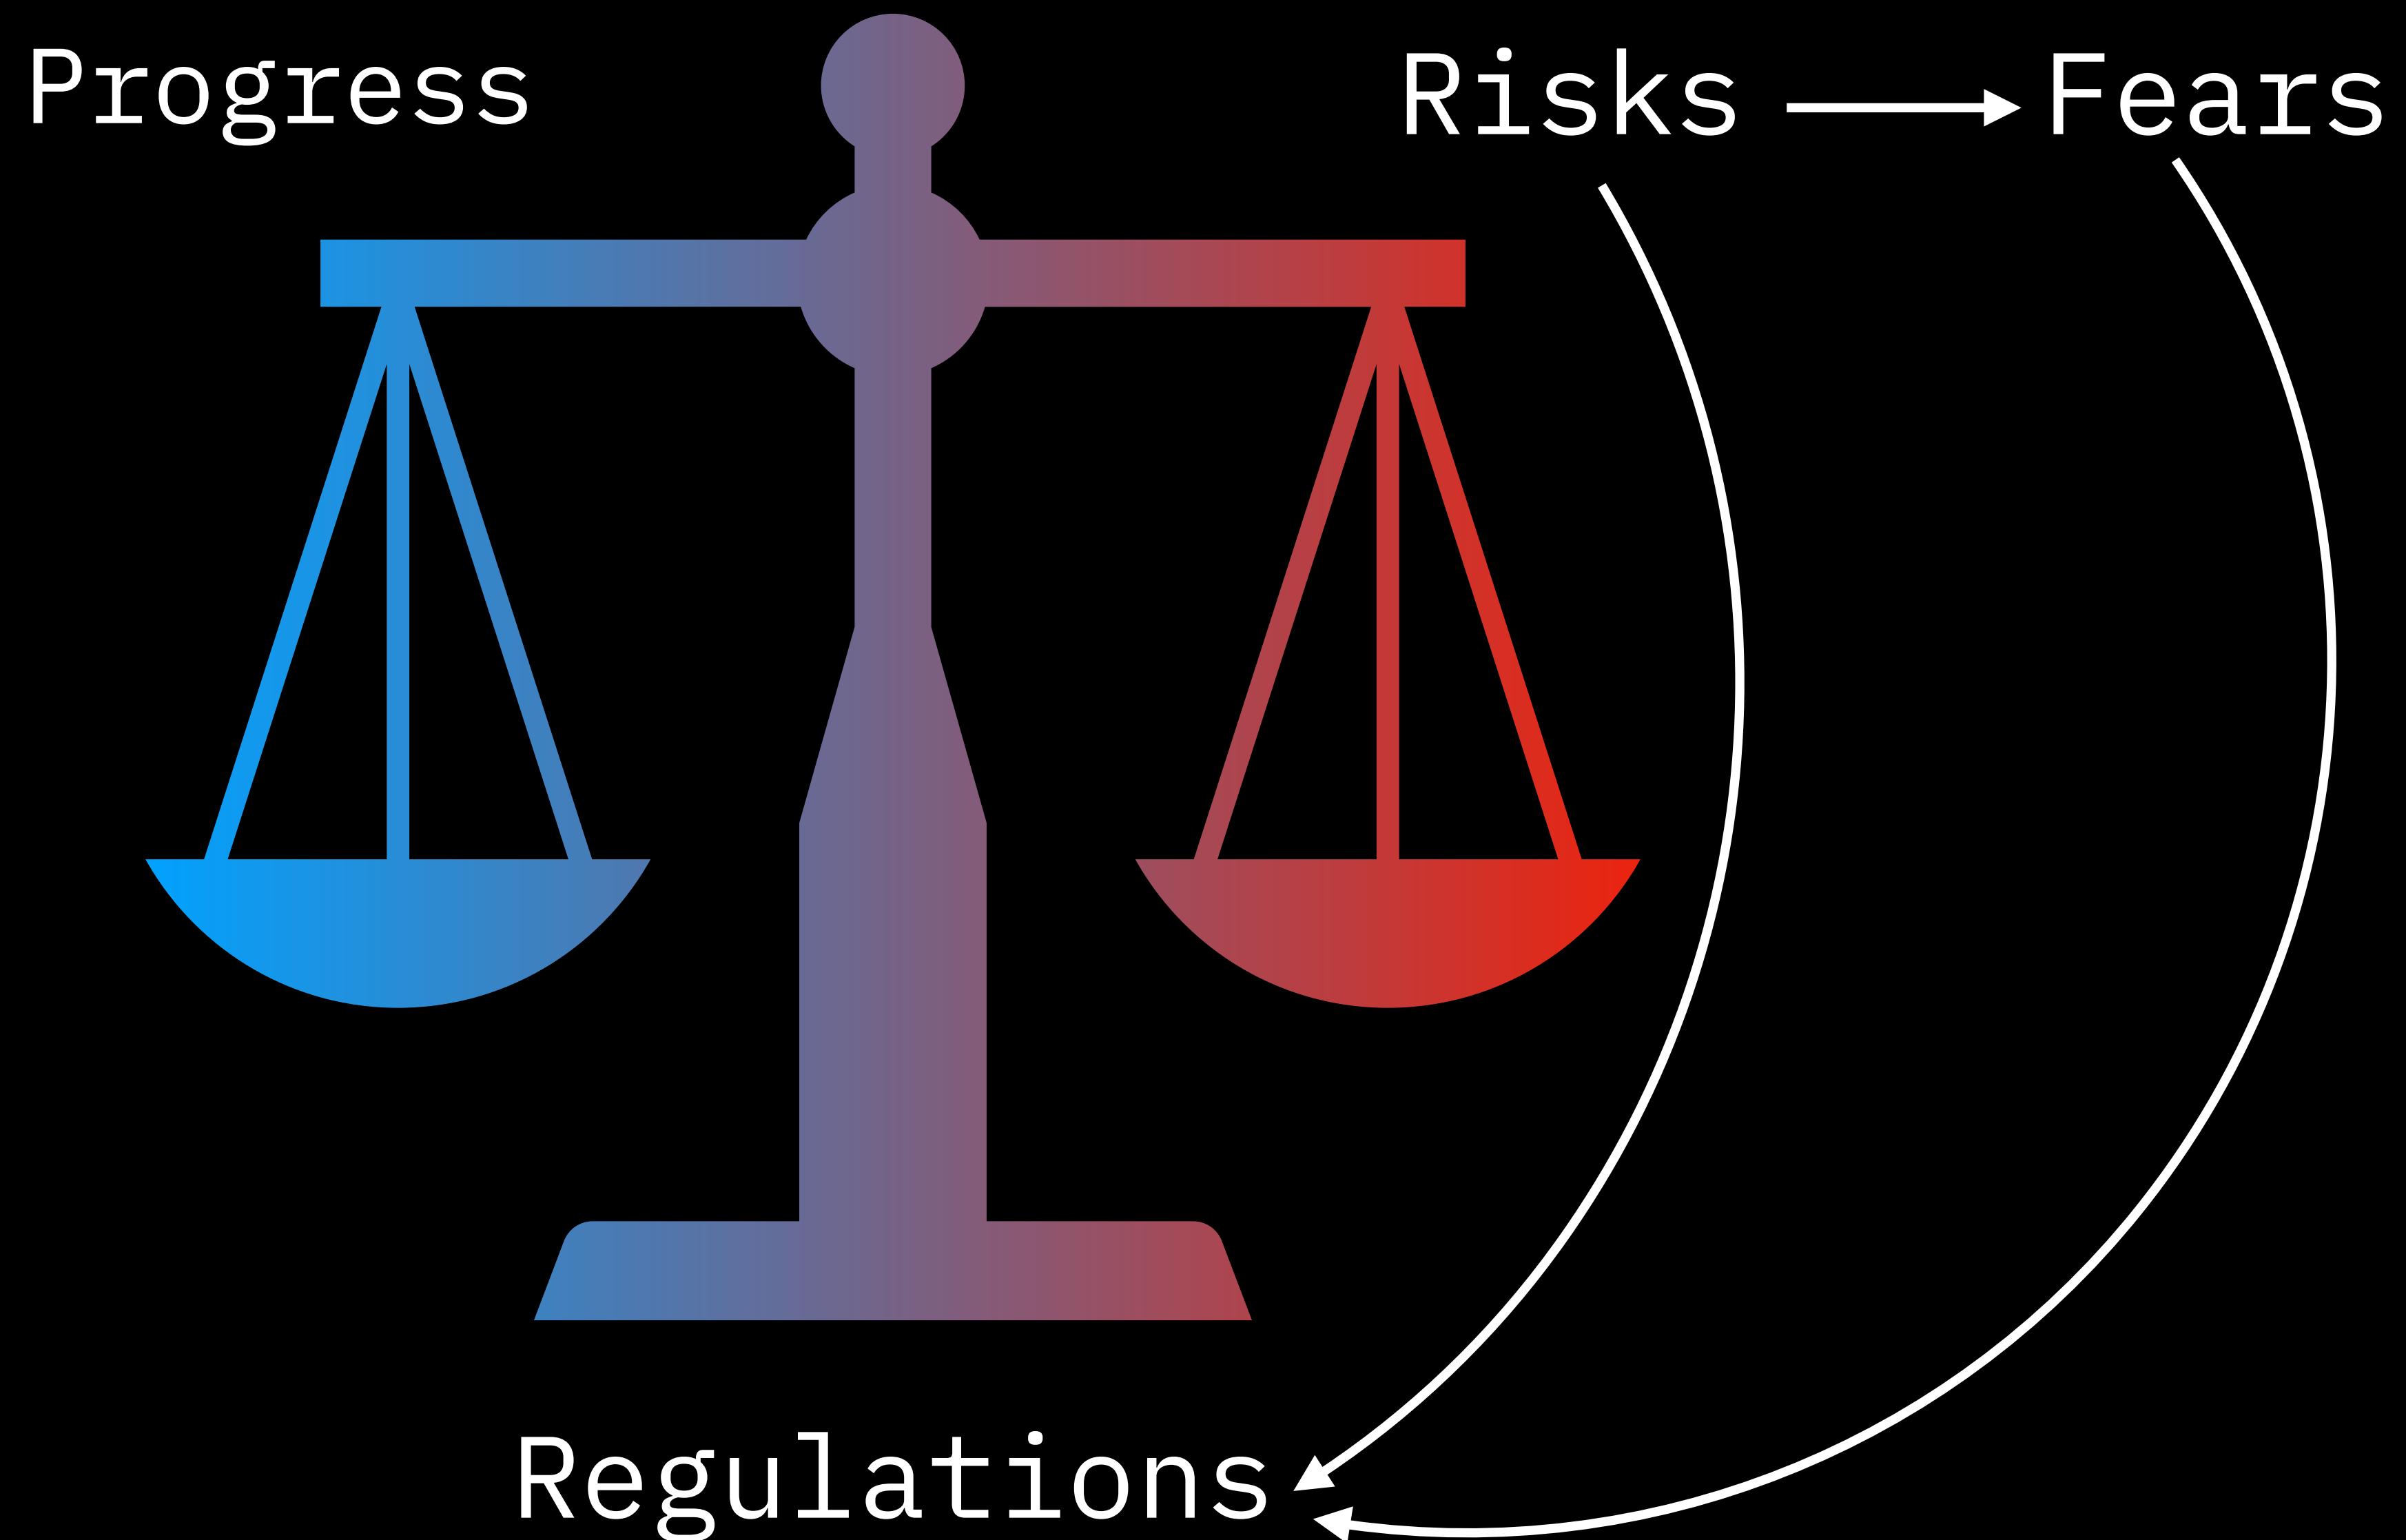

Progress

Risks → Fears

Regulations

Reality:

Reality:

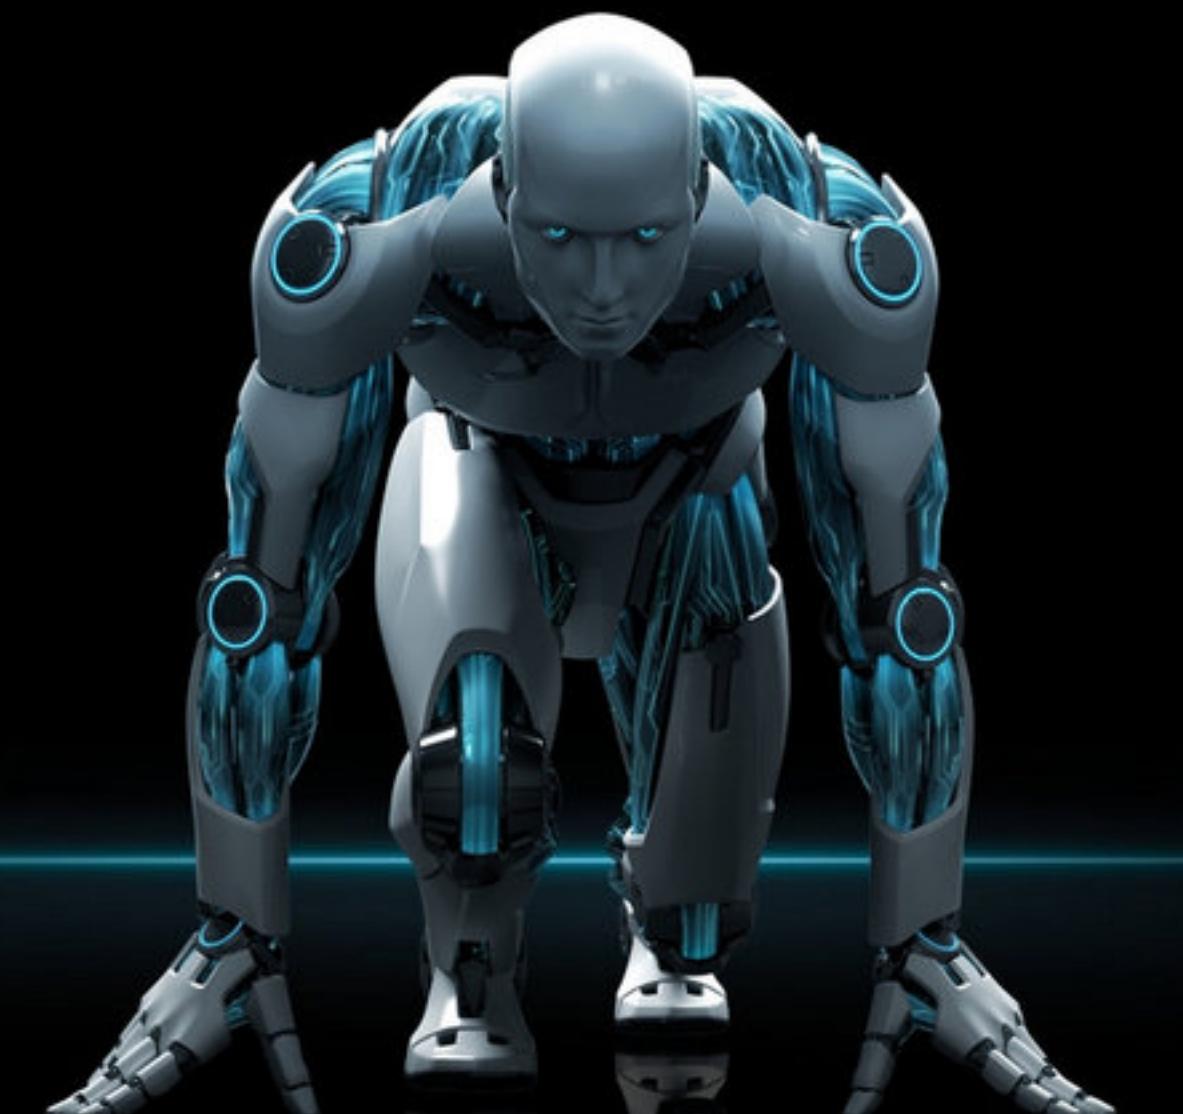

Censorship comes to computing

Forms of computing that are illegal as of today

- gambling
- dating
- human cloning
- gene modifications
- personal data (GDPR)

AI will be the next target

AI

Today

- Frees the time for creativity
- Unlocks new level of tech progress
- Helps finding new drugs, treatments, design gene therapy

Tomorrow

- Extending own intelligence
- Extending life beyond biological body
- Post-humanity

What will be illegal tomorrow

AI Regulations

Today

- GDPR: pseudo-privacy for the sake of political means
- Bans for autonomous weapon research

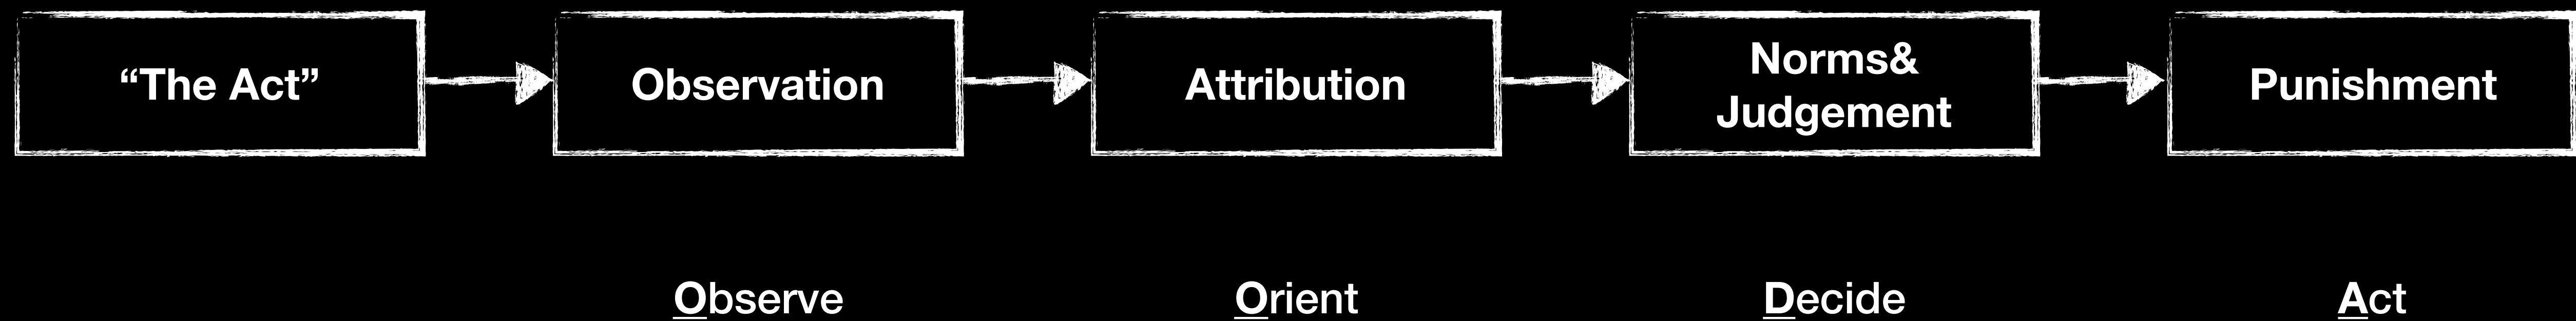

Tomorrow

- New AI regulations for «keeping the jobs»
- New taxations for AI businesses
- New regulations for life longevity research & usage

Privacy is an anti-censorship weapon

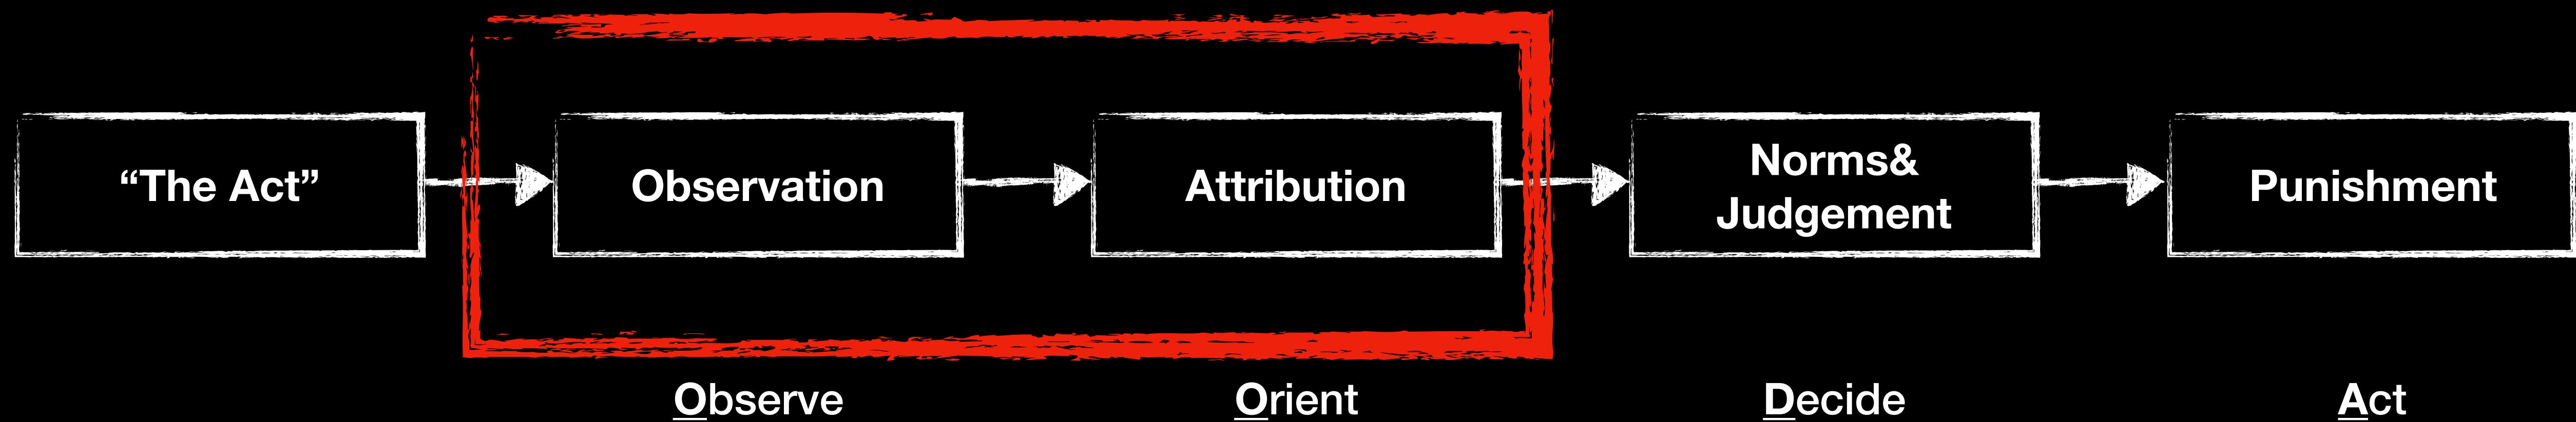

The loop of attribution

The OODA Loop of Rulership*

*Smuggler - "The project of Cryptoanarchy", HCPP 2018

The loop of attribution

Non-attributable computing

Bitcoin/Monero/Zcash etc. try to solve the attribution problem in finance

What about computations?

#FREEAI MANIFESTO

AA

Centralization is the problem

Regulations create centralization

Regulations create centralization

...also killing progress

Artificial intelligences

must be multiple

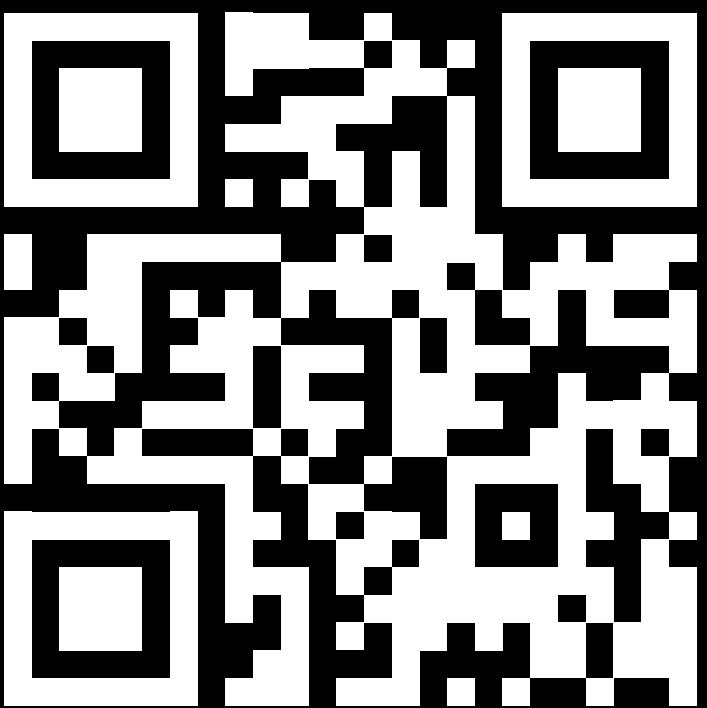

not censored or controlled

by anybody _

#FREEAI MANIFESTO

MANIFESTO.AI

We Declare #FREEAI MANIFESTO

1. AI must not be censored

Free market means uncensorability: resistance to regulations and attempts to define what's allowed and what's not; to attempts forcing free subjects to do or not to do something.

Thus, AI development and operations should rely on censorship-resistant technological stack.

2. AI must not be oligopolized or monopolized by corporations or governments

Today,

AI needs data. Big data. But we are in big data oligopoly age.

AI needs fundamental research. But researchers do not directly profit from their work: no economic incentives.

AI needs computing power. But it is expensive and oligopolized.

We aim to create open, competitive and decentralized markets for big data, machine learning models and computation power.

3. AI must not be singular

Singular AI will create risks and danger for the whole humanity. We need multiple cooperative and competitive forms of AI to be evolving simultaneously.

4. Multiple AIs must become parties involved into global economy

Open economy brings trading instead of war; non-zero sum games instead of zero-sum.

AI and robots must be allowed to trade and become independent parties and players in the economy like legal entities and companies already became non-human parties of our economy, culture and civilization.

Thus, our manifesto is the following:
the future for both humanity and AI are
in their successful cooperation –
multiplicity, decentralization and open
economy instead of governmental
regulations and «AI ethics»

#freeai

#decentralizeai

Instead of:

AI regulations

Use:

Economic incentives

Big data regulations

Zero knowledge

AI "Kill switch"

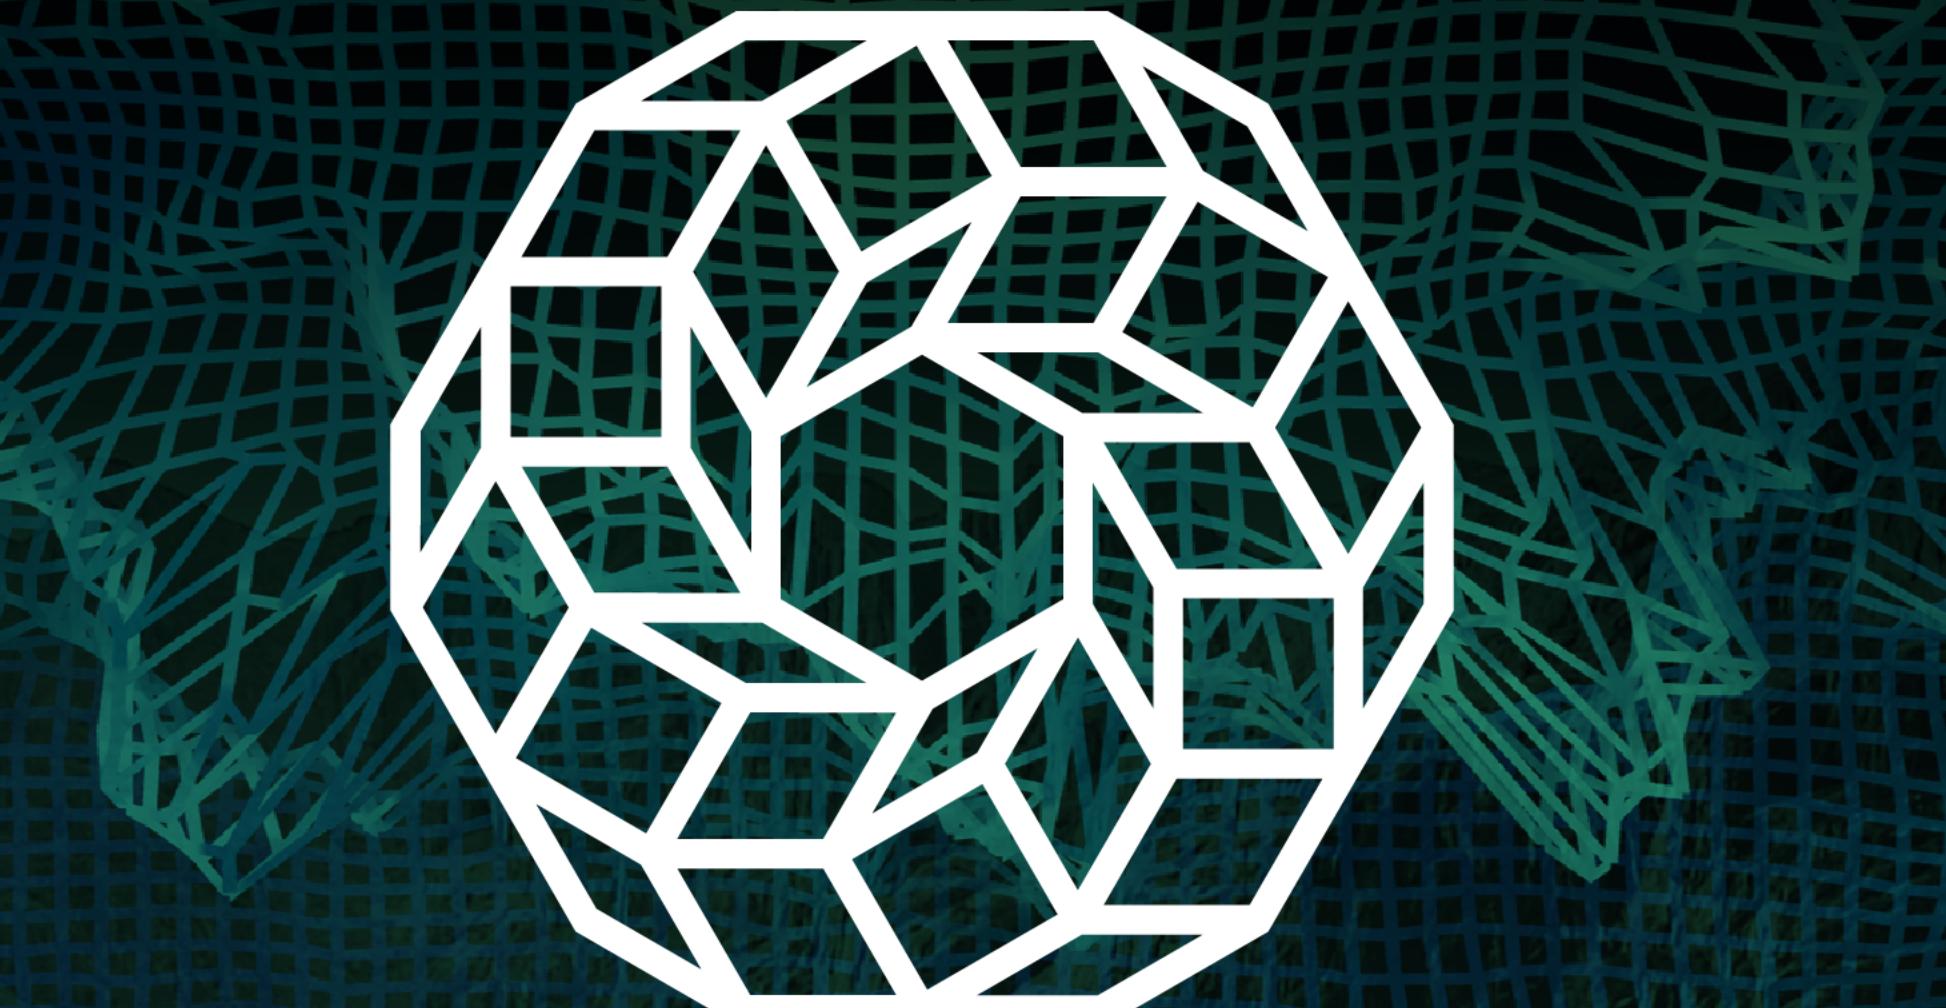

Game theory

"Azimov laws"

Audibility & accountability

How it can work

Introducing Prometheus by Pandora Boxchain

PAN DORA

BOX CHAIN

PROMETHEUS
CONSENSUS

General concept

To make AI and non-AI computations uncensorable

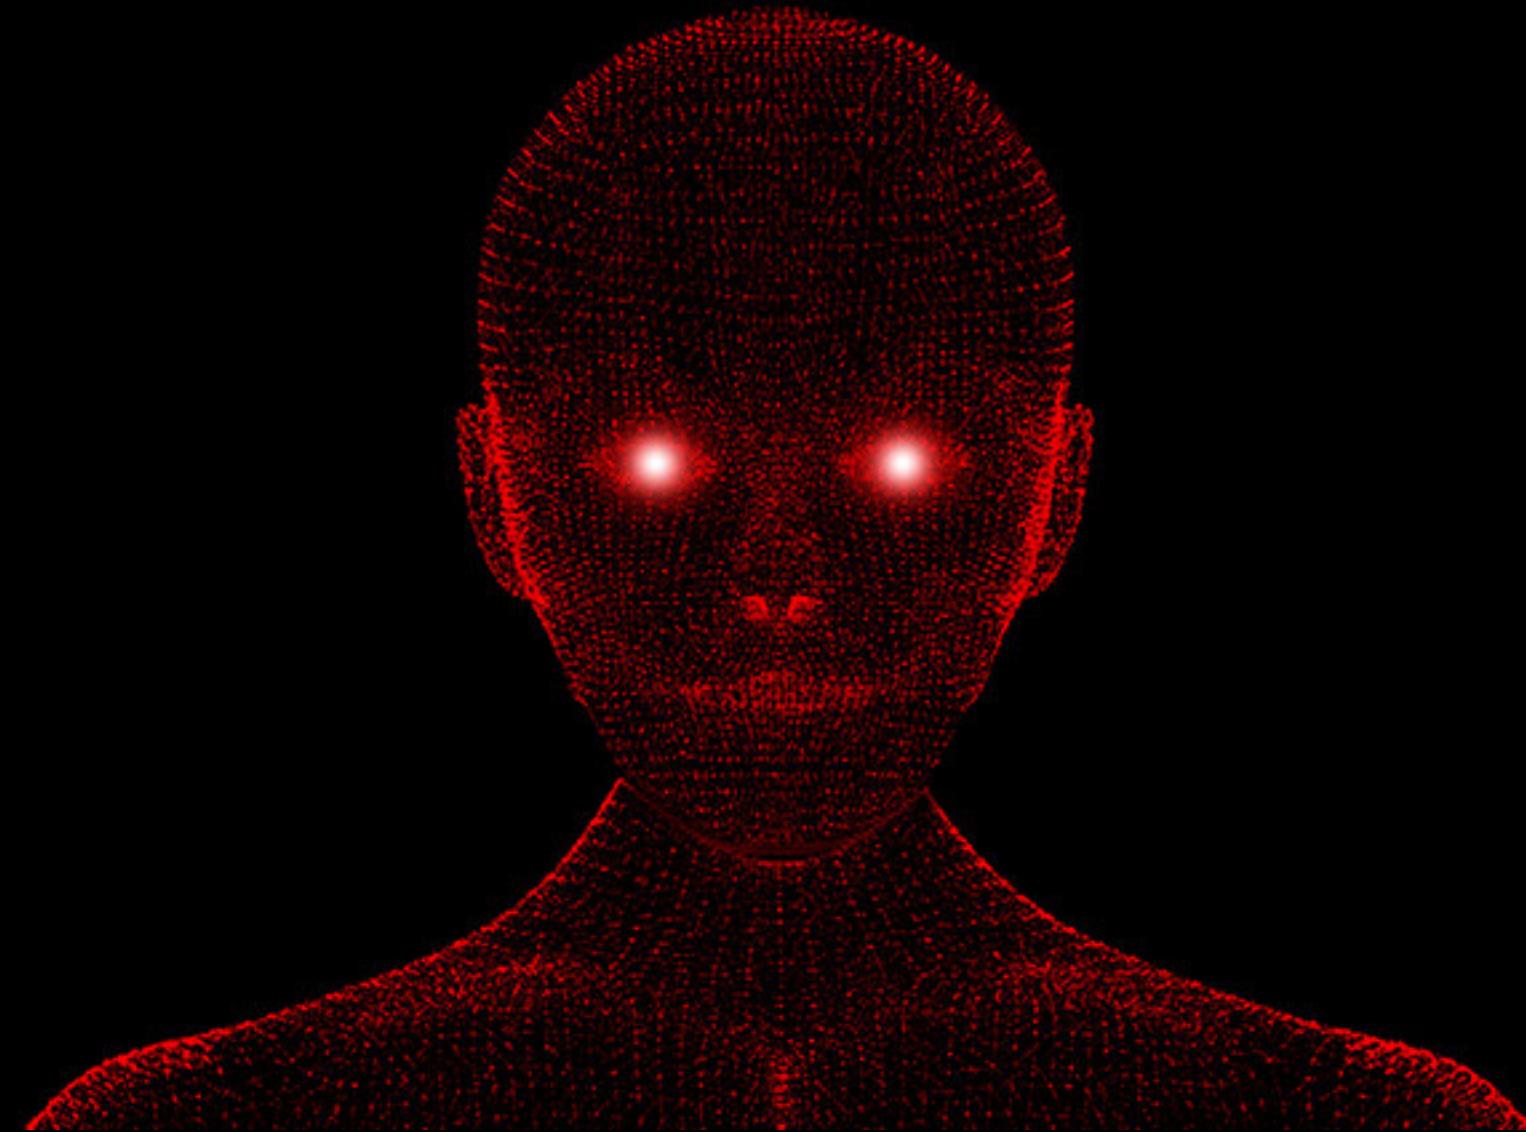

What we have so far

- Detailed specification on how to build and launch the system on top of Bitcoin Layer 1
- Test net (Ethereum based)

How to get involved

- spread the word
- contribute code to the repositories
- sign the Free AI Manifesto
- subscribe to our channels and social pages

Thank you!
